## AXON FOR DOCUMENTUM & MAXIMO

### Product Overview

AXON for Documentum & Maximo provides two-way integration between EMC Documentum and IBM Maximo. Specifically, it is designed for the EMC Documentum Energy and Engineering products, Capital Projects and Asset Operations.

Highly-regulated industries within the Energy and Engineering sector are able to modernise internal information management systems by implementing Documentum for all document management needs and Maximo for supply chain management and plant maintenance. AXON for Documentum & Maximo seamlessly connects these two independent systems, leading to increased efficiency and data quality. The result is that companies have direct access to all the required data within Maximo and Documentum simultaneously, improving processes and eliminating the risk of compromising crucial document management policies.

### Key Features

- Robust integration with EMC Documentum
- Designed to specifically integrate Documentum and Maximo.
- Highly extensible and configurable.
- Fully supported and maintained.
- Easily deployed off-the-shelf.
- EMC certified technology.

### Business Benefits

- Out-of-the-box integration for unstructured documents and structured data.
- Seamless two-way functionality between Documentum and Maximo processes.
- Provides integration between Maximo and Documentum Energy and Engineering.
- Low cost, highly affordable.
- Fit for purpose and fully extensible.

### Integrate Key Systems

AXON for Documentum & Maximo is an EMC Certified solution. EMC engineers have validated its architecture for functional completeness, performance, scalability, security, deployability, supportability, and interoperability with associated enterprise applications. EMC Certified solutions offer alignment with EMC platforms, generate a rapid return on investment, and replace expensive customisations.
